RIVALYZE ANALYZE: ADAPT: ACT

Track : Market Intelligence

TEAM NAME : KAASILLA.CPP

TEAM LEADER : ANGELIN ANTO

TEAM MEMBERS : GRACIA, HARISH, JOSHITHA

PHONE NUMBER : 9791166036

ROOM NO. : 247

PROBLEM STATEMENT:

- **The Fragmentation Crisis:** Competitive intelligence is currently a manual "hunt" across **siloed sources** like landing pages, reviews, and ad libraries.
- **Decisional Latency:** Teams are trapped in "reactive" mode—only noticing a **competitor's pivot months after** it happens, leading to lost market share.
- **The Objective:** Build an autonomous engine that mirrors the work of a consultant by providing **Decision-Ready Insights** instead of raw data.
- **The Approach:** Gather data with a **data-scraper**, generate **insights** and **predictions**.
- **The Result:** Move from "slow, blind guessing" to responding in hours, ensuring your sales pitch always owns the market gap.

INNOVATION AND UNIQUENESS:

- **Brand Personality Mapping:** Unlike standard analysis generators, our system uses LLMs to decode the "Psychological Positioning" of a competitor (e.g., distinguishing between a "Disruptor" vs. a "Safe Corporate" tone).
- **The "Trust Gap" Metric:** We cross-reference marketing claims (what they say) against real-world user reviews (what they do). High discrepancy identifies a **Market Whitespace** for a new entrant.
- **Automated "Founder's Playbook":** The system doesn't just show data; it generates a specific tactical roadmap for a new product launch based on detected gaps.

TECHNICAL ARCHITECTURE:

- **User Layer** - Google login + product input + competitor selection.
- **Orchestration Engine** - search → scrape → analyze → compare.
- **Data Acquisition** - Serper.dev (competitors) + Firecrawl (web + reviews scraping)
- **AI Intelligence Layer** - Gemini for page selection and analysis analysis
- **Data Processing** - Normalization, keyword extraction, sentiment analysis, trend detection
- **Analytics Engine** - Threat scores, white space analysis, customer vs market gap, etc.
- **Presentation Layer** - Comparison-based UI + charts + rankings + founder playbook

FEASIBILITY AND VIABILITY :

Feasibility:

- **Data Completeness** → Structured ingestion of data ensures meaningful coverage.
- **Change Data Quality** → Snapshot + delta detection enables precise tracking of competitor updates.
- **Execution Readiness** → Built using production-grade APIs.

Viability:

- **Actionability** → Converts raw data into decision-ready insights.
- **Usability** → Designed for non-technical users to explore trends and extract strategy easily.
- **Market Relevance** → Solves a real, high-frequency problem for B2B SaaS teams.
- **Scalability** → Lightweight, cost-efficient system that grows with additional data sources.

IMPACT AND BENEFITS:

- We eliminate **decisional latency** - convertes scattered competitor signals into **instant, decision-ready strategies**.
- Helps teams identify **pain-points**.
- **Reduces** strategic **risk** for founders.
- **Democratizing analysis** and marketing strategies.
- Turns **noise** into a **competitive advantage**.
